

# HOW TO AUTOMATE FLEET DECISIONS

Keep, Sell, or Inspect

# How to make fleet decisions?

“Keep, Sell, or Inspect”

Here's how I turned  
messy spreadsheets into  
smart recommendations.

**Dr. Sebastian Brickel**

@TheRemoteConsultantSebastian

# The Problem

- Fleet management decisions were slow and subjective.
- Hundreds of trucks and multiple data sources.
- No unified way to decide which trucks to keep, sell, or inspect.

**Dr. Sebastian Brickel**

@TheRemoteConsultantSebastian

# The Data Chaos

6 disconnected Excel files, 6 different truths.

We need to change strategy without changing code.

**Dr. Sebastian Brickel**

@TheRemoteConsultantSebastian

# The Goal

A automated, daily-updated recommendation system.

Should we **KEEP** it, **SELL** it, or **FLAG** it for **INSPECTION**?

**Dr. Sebastian Brickel**

@TheRemoteConsultantSebastian

# The Approach

**Python + Pandas**  
**+**  
**Data Logic**

A model that:

- Cleans and merges all sheets

- Calculates financial, operational, and mechanical metrics

- Applies decision logic using adjustable thresholds

**Dr. Sebastian Brickel**

@TheRemoteConsultantSebastian

# Metrics and Decision Engine

## Flow Example:

**SELL** → High mileage +  
High repair + Low usage  
+ Resale  $\geq$  Loan balance

**KEEP** → Active + Low  
repair + Resale  $<$  Loan  
balance

**INSPECT** → Borderline or  
missing data

**Dr. Sebastian Brickel**

@TheRemoteConsultantSebastian

# The Output

One clean table. One clear answer.

Smarter. Faster. Data-driven.

Want to do this for your fleet?
