

Accountability Checklist

+ Threshold Rubric

The Remote Consultant — fill one sheet per agent or automated workflow.

1 Named Owner

Owner name

Role

Covers (which agent / workflow / decision)

2 Checkpoint Before Irreversible Steps

Irreversible step

Checkpoint owner

Sign-off required before? (yes/no)

3 Escalation Trigger

Trigger condition

How to Set the Threshold

Score once per agent or workflow, not once for the whole company. One point per question, add the three.

1

Data sensitivity
Personal, financial, or regulated data involved?
1 = no 3 = yes, high sensitivity

score (1-3)

2

Reversibility
Can a wrong output be undone with no external trace?
1 = fully reversible 3 = irreversible / externally visible

score (1-3)

3

Blast radius
Does this affect one record, or many at once?
1 = single case 3 = batch / system-wide

score (1-3)

Total score

Score	Action
3 to 4	Low threshold for human review is fine. Spot-check periodically.
5 to 7	Review required above a defined confidence score, not on every run.
8 to 9	Human sign-off required every time, no exceptions, until the process has a track record.
